

Treat Sciatica Symptoms With Chiropractic

Chiropractors regularly treat sciatica. Sciatica is characterized by pain that originates in the low back or buttock that travels into one or both legs. Sciatic nerve pain varies in intensity and frequency; minimal, moderate, severe and occasional, intermittent, frequent or constant.

Pain is described as dull, achy, sharp, toothache-like, pins and needles or similar to electric shocks. Other symptoms associated with sciatica include burning, numbness and tingling sensations. Sciatica is also called radiating or referred pain, neuropathy, or neuralgia.

What Causes Sciatica?

Sciatica is generally caused by sciatic nerve compression. Disorders known to cause sciatic nerve pain include lumbar spine subluxations, herniated or bulging discs (slipped discs), pregnancy and childbirth, tumors, and non-spinal disorders such as diabetes, and constipation.

One common cause of sciatica is piriformis syndrome. Piriformis syndrome is named after the piriformis muscle. The piriformis muscle is located in the lower part of the spine, connects to the thighbone, and assists in hip rotation.

The sciatic nerve runs beneath the piriformis muscle. This muscle is susceptible to injury from a slip and fall, hip arthritis, or a difference in leg length. Such situations can cause cramping and spasm to develop in the piriformis muscle, thereby pinching the sciatic nerve and causing inflammation and pain. Sciatic nerve compression may result in the loss of feeling (sensory loss), paralysis of a single limb or group of muscles (monoplegia), and insomnia.

Chiropractic Treatment of Sciatic Symptoms

The purpose of chiropractic treatment is to help the body's potential to heal itself. It is based on the scientific principle that restricted spinal movement leads to pain and reduced function and performance.

Chiropractic Care Is A Non-Invasive And Drug-Free Treatment Option

The type of chiropractic therapy provided depends on the cause of the patient's sciatica. A sciatica treatment plan may include several different treatments such as ice/cold therapies, ultrasound, and spinal adjustments.

Below are more details on these chiropractic treatment modalities:

- **Ice/Cold Therapy:** Reduces inflammation and helps to control sciatic pain.
- **Chiropractic Adjustments Or Spinal Manipulations:** At the core of chiropractic care are spinal adjustments. Manipulation frees restricted movement of the spine and helps to restore misaligned vertebral bodies to their proper position in the spinal column.

Spinal adjustment helps to reduce nerve irritability responsible for causing inflammation, muscle spasm, pain, and other symptoms related to sciatica. Adjustments should not be painful. Spinal manipulation is proven to be safe and effective (source: spineuniverse.com).

Nachmias Chiropractic – The #1 Chiropractor To Treat Sciatica

Dr. Adam Nachmias at Nachmias Chiropractic has successfully treated sciatica patients for more than 28 years. Dr. Adam is the #1 choice for New York patients and has been awarded ***“Best Chiropractic In NewYork”***, for two years in a row. Nachmias Chiropractic has practices in both Bayridge and Manhattan, New York.

There is still time to take advantage of our **“Back To School”** campaign and get discounts on chiropractic and massage (valid until November 2, 2017). Claim your discount here: <http://calldradam.com/chiropractic-deals/>

To book an appointment with Dr. Adam Nachmias, call any of our offices:
Brooklyn: 718-238-8900
Manhattan: 212-924-1700

Or book online: <http://calldradam.com/contact/book-online/>
